Greater quality of life – with

BELI – for ease of mobility

> BELI lift for the handicapped

Thousands of people are daily restricted to their wheelchair. They have to live with it every day, which is stressful for them and for those around them. How can a wheelchair user get onto a normal chair and from there back into the wheelchair? Living habits have to be changed and adapted. But how?

> BELI offers the ideal solution

BELI helps handicapped people, the elderly and the sick to enjoy more mobility, independence, and therefore greater quality of life, without great physical effort. This also applies to those undergoing rehabilitation after long periods of illness for example as an aid to standing upright following hip operations. This is a completely new idea, since there has never been such a flat lifting device for furniture before. BELI helps master the needs of day-to-day life, especially the domestic needs of handicapped and sick people. BELI raises and lowers almost all types of chairs and beds to wheelchair height.

> BELI makes care easier and saves costs

No transport

BELI is an ideal aid in retirement and care homes, also making day-to-day work easier and simpler for care staff in rehabilitation centres and care services, for example when moving the patient from the bed to the chair. Until now, this has required great physical effort on the part of care staff. With BELI, the whole process is much quicker and easier. In many cases, BELI can often be operated by the patient himself. This both protects the health and strength of care personnel, and gives the patient a greater degree of independence.

> BELI integrates

The physical difficulties are often accompanied by psychological stress. When a person is forced to become a wheelchair user 'overnight' as a result of an accident, this often leads to considerable problems in personal relationships. In most cases, the marital bed has to be "divided" and one side replaced by a bed suitable for the handicapped. With BELI, this procedure is no longer necessary. The bed frame of the handicapped or sick person can simply be raised or lowered as part of the existing bed in order to get into the wheelchair or for care purposes.

BELI can also be used as a fully adjustable ramp, allowing the wheelchair user to negotiate steps with ease.

Easy and convenient movement from normal chairs to the wheelchair. BELI raises the whole chair or sofa to wheelchair height.

Movement therapy. The chair or sofa is simply raised to the required height, to allow the therapist to work easier and more effectively.

BELI raises the bed frame to wheelchair height, so that a handicapped person can simply slide over from the bed into the wheelchair. This also makes care procedures easier, requiring no heavy lifting by care staff.
